Mouse Anti-HCV NS-3 Monoclonal Antibody Datasheet

Product Name: mAb anti-HCV NS-3 Clone No.: 12-15

Catalogue No.: MO-I40018D Quantity: 0.5 mg/vial

Description: Mouse monoclonal antibody to human

hepatitis C virus (HCV) non-structural

protein NS-3

Purification: Protein G affinity purified

Product Type: Primary antibody

Human hepatitis C virus (HCV) non-**Target Protein:**

structural protein NS-3

Immunogen: A highly antigenic polypeptide consisting

> of essential sequences of at least 60 residues in length, which were selected from genes encoding the NS-3 region of

a Chinese HCV strains.

Fusion Sp2/0-Ag14

Myeloma:

Specificity: React with synthetic HCV NS-3 protein

(residues 1378-1458 on HCV

polyprotein)

Species Human hepatitis C virus, others not

Reactivity: tested

No cross-reaction was found with HCV Cross -Reactivity: polyprotein core region, or other non-

structural regions.

Host / Isotype: Mouse, IgG1 Kappa

Formulation: Lyophilized from a solution in 0.01M

PBS, pH 7.2

Reconstitution: Double distillated water is

> recommended to adjust the final concentration to 1.00mg/mL.

Store at -20°C Storage:

Research

Area:

Virology

Background:

Hepatitis C virus (HCV) causes chronic

hepatitis and liver cirrhosis in human

through blood and body fluid

transmission. HCV has a positive sense single RNA genome enclosed in the nucleocapsid made of core protein (capsid protein). The nucleocapsid is covered by an envelope made of lipoproteins (E1 and E2). The 9.6 kb HCV genome has a single open-reading frame, which is to be translated into a single polyprotein. HCV viral proteins are produced after processing the polyprotein. Genes for core protein and envelop proteins are located adjacently

at the 5'-end of HCV genome, followed

by genes for non-structural proteins

including NS2, NS3, NS4A, NS4B, NS5,

NS5A and NS5B.

Applications: ELISA: React with HCV NS-3.

> Western Blot: mAb clone 12-15, at a concentration of 1µg/mL will allow visualization of 100ng/lane synthetic NS-3 protein. The mAb works on blots transferred from both reducing and non-

reducing PAGE gel.
